SHAREPOINT DEVELOPER

SharePoint & Power Platform Developer with **4+ years** of experience in SPFx (React Js), SharePoint Online customizations, Power Apps, Power Automate, and enterprise-level workflow automation. Proven ability to design modern SharePoint solutions, build scalable SPFx components, optimize document management environments, and collaborate with business teams to deliver high-impact solutions.

TECHNICAL SKILLS

Languages	: React, JavaScript, jQuery, TypeScript
Frameworks	: SharePoint Framework (SPFx)
Technologies	: HTML, CSS, Bootstrap, JavaScript, SQL
APIs	: REST Web APIs
Tools	: PowerApps, Power Automate, Power BI, Power Virtual Agents, SharePoint Online

BRIEF OVERVIEW

- Designed and developed customized sites based on SharePoint technologies.
- Worked for various aspects of software development including **design creation, coding, testing, debugging** and **documenting** of new and amended SharePoint Online applications.
- Strong experience of **SharePoint Online**.
- SharePoint Framework (**SPFx**) developer experiences using React Framework for client-side-development using REST Service queries on SharePoint lists, document libraries and Search APIs.
- Work directly with clients to support various projects and solutions.
- Responsible for developing **Power Apps** model and canvas driven apps for different business requirements.
- Utilize problem-solving skills to understand client pain points and troubleshoot as challenges arise.
- Maintained and supported to existing Power Apps by responding to issues related to it.
- Microsoft **Certified Power Platform Fundamentals Associate**.
- Responsible for developing **Microsoft Power Automate** Flows for different business requirements.
- Maintaining and supporting existing sites by responding to issues related to **user/site permissions, security, performance**, Microsoft Power Apps, Power Automate flows and other technical issues.
- Interacted with clients for requirement gathering, showcasing strong communication skills in team collaboration.
- Experience working with **Microsoft Dataverse** for storing, managing, and integrating business data across Power Platform applications.

PROJECT EXPERIENCE

Associate (Developer)
Cognizant Technology Solutions (CTS)

Oct 2021 – Present
Hyderabad

Project #1: VAULT – SharePoint Online Document Management System.

Client: Medtronic
Role: SPFx Developer.

Project Description: VAULT is a secure SharePoint Online document management portal that enables fast and accurate retrieval of confidential documents through custom filters, metadata-driven views, and advanced search. Built using SPFx, ReactJS, and Power Automate, it delivers scalable, user-friendly, and automated document management experience with strong access control and modern SharePoint capabilities.

- Designed and developed custom SharePoint Framework (SPFx) web parts using ReactJS to implement advanced document filtering, search, and dynamic UI components.

- Built modern SharePoint Online sites using out-of-the-box web parts such as Document Libraries, Lists Search, and Highlighted content to ensure rapid development and consistency.
- Implemented metadata-driven document libraries to improve document classification, search accuracy, and retrieval speed.
- Designed and implemented Power Automate workflows to automate document approvals and send notifications on document upload, update, and approval events.
- Integrated advanced search capabilities using SharePoint Search and custom filters to allow users to fetch documents efficiently.
- Configured role-based permissions and access controls to protect confidential client data.
- Ensured responsive design and cross-browser compatibility for all custom web parts.
- Collaborated with business stakeholders to gather requirements and translate them into technical solutions.
- Performed testing, deployment, and post-deployment support for SharePoint Online environments.

Project #2: Amgen GL&P SharePoint Site

Client: Amgen.

Role: SPFx Developer.

Project Description: GL&P site provides healthcare staff with a centralized, globally accessible training data solution to stay updated on latest information (e.g., conditions, guidelines, and care procedures).

- Built modern SharePoint Online sites using OOTB web parts (Text, List with Card View, Quick Links) to deliver clean UI and rapid development.
- Developed multiple custom SPFx web parts using ReactJS and TypeScript, including advanced list views with custom filters, sorting, and server-side pagination.
- Created card-view components designed for visually rich content presentation and built React-Table–based views to enable faster rendering and smoother user interaction.
- Created a Dynamic Page Web Part that loads content based on Product ID or selected item, improving contextual navigation.
- Implemented a List and Card View toggle with saved user preferences for a personalized browsing experience.
- Built a Dynamic Content Details Page that displays item-specific data based on user selection, reducing clicks and improving usability.
- Developed SPFx solutions to surface curated content from SharePoint lists and libraries, improving content relevance and accessibility.
- Automated key business processes with Power Automate, including product-update notifications, governance alerts with change logging, and backend tracking for UI-driven actions.
- Ensured all custom solutions were fully responsive and cross-browser compatible.
- Performed end-to-end testing, deployment, and post-deployment support to ensure smooth rollout and reliable user experience.

Project #3: Room Booking Application (Power Apps Canvas)

Client: Medtronic

Role: PowerApps Developer

Project Description: The MIC Room Scheduling application, developed using PowerApps, is designed to streamline the booking of rooms for events associated with training activities. This application not only manages room reservations but also provides a dashboard with valuable data

insights. It will be implemented across three regions: Japan, Korea, and Singapore.

- Built a tab-based screen layout so users can easily check room availability, create or edit bookings and view their reservations.
- Added multi-language support so users can switch the app to their preferred language using a translation table.
- Created booking forms that automatically change language based on the user's selection.
- Set up a Power Automate approval flow to review and approve new room booking requests.
- Built notification flows that send emails when a booking is created, updated, approved, or cancelled.
- Created a scheduled reminder flow that sends automatic reminders for upcoming bookings three months before the event.
- Set up role-based and region-based visibility so Admin and Member users only see the rooms and screens they are allowed to access.
- Built a Power BI dashboard to show booking insights like monthly and quarterly usage.

Project #4: R&D Supplier Management System Application (Power Apps Canvas)

Client: Amgen

Role: PowerApps Developer

Project Description: Supplier Management System is a Canvas PowerApps with Dataverse as backend Data sources used for Tracking and Managing Suppliers and their Services.

- Designed and created Dataverse tables to securely store supplier master data, approval status, tags, and user access information.
- Defined table relationships in Dataverse to support structured supplier data, lookup fields, and seamless integration with Canvas App screens.
- Implemented Dataverse business rules to enforce data validation, required fields and conditional logic during supplier creation/updates.
- Optimized application performance by using Dataverse views, filtered queries, and delegable operations for scalable data retrieval.
- Configured security roles and field-level permissions in Dataverse to control access for Admins, Approvers, and Standard Users.
- Built Dataverse audit logging to track changes to supplier records, such as data edits, approvals, and new supplier additions.
- Utilized Dataverse as the central data source for Power Automate workflows, enabling automated supplier verification emails and status updates.
- Implemented Dataverse triggers in Power Automate for real-time notifications when new suppliers were added or data was modified.
